

P. MUHAMMADHU NAZAR ALI

+91 6381920315 • [Portfolio](#) • [Email](#) • [LinkedIn](#) • TENKASI, TAMIL NADU

OBJECTIVE

Dedicated and proactive B. Tech Computer Science student with a strong passion for problem-solving and research. As an engineering student, I focus on delivering useful outcomes through my projects. Known for managing tasks efficiently and facing challenges with confidence.

EDUCATION

Kalasalingam Academy of Research and Education B.Tech/CSE-AIML, 8.96 CGPA	Expected 2026
Sri Parasakthi Vidyalaya (CBSE), Courtallam 10th, 68.6%	2019 - 2020
Esaki Vidyaashram (CBSE), Tenkasi 12th, 62.3%	2021 - 2022

SKILLS

• Python • SQL • Leadership • Machine Learning • Deep Learning • HTML • CSS • Bootstrap • Django

EXPERIENCE

VINSUP INFOTECH PRIVATE LIMITED FULL STACK DEVELOPER	Tenkasi, Ayikudy May 24 - June 24
- Gained hands-on industry exposure by working as a Full Stack Developer on a Medical Sales and Stock Maintenance Website during an off-campus internship. - Developed and completed the project within 20 days using HTML, CSS, JavaScript, Bootstrap, and Django for backend functionality, delivering the final product to the client.	

IEEE ROBOTICS AND AUTOMATION SOCIETY TEAM SENSORS AND ACTUATORS	DEC 24 - Present
--	------------------

- Selected for the IEEE RAS Sensors and Actuators Team, where I learned about different sensors, how they work, and how to use them in IoT and AI-integrated projects.

PROJECTS

Car Booking Web-Application

Tech Stack: Type Script, React.js

This website is designed for booking limousine rides with an easy-to-use interface. Users can select vehicle type, number of passengers, and add ride details effortlessly. It offers a clean and responsive design for a smooth booking experience.

([CLICK HERE](#))

Medical Stock Management System

Tech Stack: Django, HTML, CSS, Bootstrap, JavaScript, SQLite

Developed a web-based medical stock management system for agencies to track medicine inventory and manage sales to pharmacies and private hospital stores. Handled both frontend design and backend development to ensure smooth data handling and user-friendly interface. ([CLICK HERE](#))

Mental Wellness Android App

Tech Stack: Heart rate Sensor, Flutter, Dart, MicroSoft-Azure

Developed a mental wellness support app that uses real-time heart rate data from a wearable device to suggest stress-reducing activities. Integrated Microsoft Azure for cloud data processing and categorized user states into stress levels to provide personalized activity recommendations.

Navigation System for Visually Challenged

Tech Stack: Arduino, Ultrasonic Sensors, Buzzer, Vibration Motor, GPS Module, IoT

Developed an automated navigation system for visually challenged people, integrating smart shoes and spectacles to detect obstacles in all directions. The system uses four ultrasonic sensors, each paired with a buzzer and vibration motor, providing distinct sounds and vibrations to guide the user. Additionally, a GPS module tracks the user's location, allowing relatives to monitor their movements. ([CLICK HERE](#))

ACHIEVEMENTS

- Published a design patent titled "[Navigation System for Visually Challenged](#)" under the Intellectual Property of India, Government of India.
- Secured First place in "[Project Expo](#)" Conducted by Paavai College of Engineering.
- Secured First place in "[Project Expo](#)" Conducted by Mahendra College of Engineering.
- The project was selected for the "[Google Solution Challenge 2024](#)" regional bootcamp in the Madurai region.
